Mapping City-Owned Light Poles, Streetlights, and Electrical Lines Services

Q & A

- *What level accuracy is required when acquiring GPS data for the electrical system assets?*
 - *100% accuracy, plus or minus 6 inches.*
- *Does the city own transmission lines?*
 - *To the best of our knowledge, we do not have any transmission lines.*
- *Can you provide approximate quantities of each asset (number of streetlights, feet of underground/overhead cable, number of pull boxes, etc.)?*
 - *Streetlights - Ogden City has an estimated number of 1,437 streetlights. A recent project that converted city lights to LED's show 1,229 lights were replaced, but some city owned lights already had LED's. Ogden City will offer all streetlight information to help the winning bidder identify each streetlight and map all streetlights correctly.*
 - *Feet of underground/overhead cable – Ogden City does not have the number of feet of underground or overhead cable. A possible starting point to map how many feet of cable Ogden City has would be with the information we offer the winning bidder.*
 - *Pull boxes – Ogden City has information that will be offered to the winning bidder. As of now, we do not have an estimate of the number of pull boxes.*
